

## MARC Report

MARC Report is a program that validates RDA rules, MARC coding, and ISBD punctuation in bibliographic records. It checks for those many, many little details that are easy to miss so that errors can be corrected before records are imported into Polaris.

The latest version is MARC Report 258 and is available free of charge. No license or registration is needed, it can be loaded on as many computers as desired.

It is strongly recommended that cataloging libraries download and use MARC Report. It's a great product that helps both new and experienced catalogers produce accurate and consistent bibliographic records.

### How to get MARC Report

If your library is currently using MARC Report, you can upgrade to a new version by clicking *Help* on the menu bar, then *MARC Report Update*. You will be directed to the download page. Note: admin privileges may be required to download.

If your library is not currently using MARC Report, go here to [get the latest version](#). Note: admin privileges may be required to download.
